Board Members’ media connections and access to Financing

July 14, 2016, 14h30, ISCTE-IUL, Auditorium ONE02 (Building I)

Paul Laux
Lerner College of Business and Economics, University of Delaware

Paul Laux is Professor of Finance in the Lerner College of Business and Economics and J.P. Morgan Chase Faculty Scholar in the Institute for Financial Services Analytics at the University of Delaware. For four years he held a secondary faculty appointment at Lisbon University Institute in Portugal as Professor Catedrático Convidado. He earned the Ph.D. degree from Vanderbilt University, and has previously served on the finance faculties of The University of Texas and Case Western Reserve University. He has also served on the Law School faculty at Case Western, as an economist at the Commodity Futures Trading Commission, as Finance Department Chairperson at the University of Delaware, and as MBA Program Director at Case Western Reserve University. His research interests are in the areas of corporate finance, corporate governance, and financial markets. His research has appeared in The Journal of Finance, the Journal of Financial and Quantitative Analysis, the Journal of Financial Intermediation, the Financial Analysts Journal, and Financial Management, among others. Professor Laux has taught finance extensively in developing European countries (Bosnia, Hungary, and Portugal), and has been the recipient of two Fulbright grants. His consulting work has served clients such as the Nasdaq Stock Market, the Sydney Futures Exchange, Equiserve, the Chicago Stock Exchange, and a large currency and interest rate risk management consultancy.

[Abstract] Boards of directors with linkages to media firms have been found to enhance a firm’s news coverage and public relations. We investigate the economic effects of this enhanced communication by studying issuance of equity and debt securities. Media-linked board members are associated with more outside public equity and debt financing. For equity, the main effect is on the quantity of funds raised (i.e., an effect at the intensive margin). For debt, the main effect is on the ability and decision to issue bonds (i.e., an effect at the extensive margin). The size of the effects we uncover are economically large, with a statistical association up to an extra 15% of additional capital raised as a proportion of asset value. The effects are strongest for firms with demonstrated needs to access outside capital and that are likely already visible to investors based on their age and size. We also find associations with pricing, where firms with media-linked board members experience larger announcement day stock returns to equity issues and issue debt at lower yields. Further evidence suggests that the effects are due to skill and amassed connections, not only direct effects of current media connections. We provide evidence that these effects are not the result of endogenous effects using an instrumental variables method. We subject our results to a set of robustness checks. Our results are evidence that media-linkages positively influence the supply side of public securities markets.
